PROFESSIONAL SUMMARY

Senior DevOps engineer with 4+ years running production Kubernetes on AWS, Azure, and GCP. I lead small platform teams through migrations, shared Terraform platforms, FinOps, and security readiness - without breaking customer traffic. Recently focused on Azure hub-spoke networking, GitOps, CIS on AWS, and SOC 2 with Vanta.

EXPERIENCE

Invictus Data Inc - *Senior DevOps Engineer* Oct 2024 - Present

- Led a **3 - engineer** team across ~5 workstreams (migration, Terraform platform, FinOps, ops tooling, security readiness) - set priorities, reviewed changes, and unblocked day-to-day delivery.
- Moved production workloads from AWS Kubernetes to Azure with **99.95%** availability - planned cutover, owned rollback, and stayed through stabilization.
- Grew Azure Terraform into a shared platform (modules, remote state, multi-env) and onboarded engineers onto it so teams stopped hand-building the same stacks.
- Designed hub-spoke networking (VNet peering, shared ingress/egress patterns) for e-commerce and shared platform services, secrets via Key Vault CSI.
- Built AKS ops tools used daily - FinOps reporter, Opus (GlitchTip/Kuma/Backstage), ES error reports - via CircleCI private runners → ACR → AKS.
- Cut cloud spend from **\$178K/mo** to **\$97K (46% / \$82K)** with multi-cloud FinOps across AWS, Azure, GCP, and AI spend.
- Rolled out Istio mTLS across **50+** services, used Karpenter-based autoscaling to absorb **5×** peak traffic without customer impact.
- Built Packer images for lab/research compute baselines and lifted older GCP VM apps to GKE (~**40%** less day-to-day ops work).
- Shortened deploys by about **60%** with CircleCI + Argo CD GitOps.
- Driving SOC 2 Type I readiness in Vanta - closing Azure control gaps and collecting evidence, audit still in progress.

Triffy Digital Private Limited - *DevOps Engineer I* Nov 2023 - Oct 2024

- Kept product services up on EKS at **99.9%** while the team shipped regularly.
- Replaced slow, manual environment setup with Terraform - new envs in under an hour instead of days.
- Ran Strimzi Kafka for millions of events a day and handled the usual broker/topic operational pain.
- Put EFK + Prometheus + Grafana in place so incidents were easier to find, MTTR dropped about **40%**.
- Wrote reusable Helm charts that cut app-team config busywork by about **80%**.

Mallow Technology Private Limited - *DevOps Engineer I* Jul 2022 - Nov 2023

- Hardened AWS accounts to the CIS Foundations Benchmark in Security Hub (IAM, CloudTrail, Config, encryption, VPC/SG and ALB/Route 53 edge paths).
- Stood up GitLab CI and CodePipeline/CodeBuild so releases weren't a manual fire drill (**75%** less deploy effort).
- Wrote Python and Shell automation that gave engineers back **20+** hours a week.
- Looked after AWS for **10+** services — ECS, EC2, RDS, ALB, Auto Scaling, Route 53, CloudFront.
- Took production apps off Heroku onto ECS + RDS with no downtime for customers.

EDUCATION

KG College of Arts and Science - M.Sc. Software Systems (Integrated) 2017 - 2022 74.9%

TECHNICAL SKILLS

Cloud / Networking: AWS, Azure, GCP, VPC/VNet, hub-spoke, peering, ALB/NLB, Route 53, CloudFront, Istio

Containers: Docker, Kubernetes (EKS/AKS/GKE), Helm, Istio, Karpenter

IaC / GitOps / CI: Terraform, Packer, Argo CD, CircleCI, GitLab CI, GitHub Actions, CodePipeline

Observability: Prometheus, Grafana, EFK/ELK, OpenSearch, CloudWatch, Azure Monitor

Security: CIS AWS Foundations, Vanta (SOC 2 readiness), Key Vault CSI, IAM

Data / Messaging: Kafka, SQS, Pub/Sub, Service Bus, S3, MWAA, Redshift, Lambda

Languages: Python, Shell, Linux administration
